HOLIDAY GIFTS FOR THE HOME

contents

PAGE 25

In our second-annual Readers' Choice Awards, we showcase winners in nine different home-design categories, voted on by the real experts: YOU.

30 Mountain Majesty

A sprawling lodge near the Rockies showcases reclaimed timbers and jaw-dropping views.

38 THE WELCOME HOME SERIES Laying the Groundwork

With their timber-home plans in hand, the Olsens are ready to break ground and get their frame in place — but not without a few last-minute considerations.

42 The Great Indoors

An adventure-loving couple builds a peaceful respite in the Colorado Rockies.

50 True Heritage

Reduce, reuse, recycle. It's the triumvirate of sustainability, and this "old" timber barn built from the reclaimed wood of older structures performs a green hat trick.

The sliding doors on both sides of Roger Martin's 850-square-foot "rec barn" allow a view through the entire structure, adding to the illusion it was once a working barn.

True Heritage

Reduce, reuse, recycle. It's the triumvirate of sustainability, and this "old" timber barn built from the reclaimed wood of older structures performs a green hat trick.

STORY BY REED KARAIM | PHOTOGRAPHY BY HEIDI LONG

The great room offers both the warmth of a majestic fire for chilly mountain nights and soaring windows to let in the light on summer days.

OPPOSITE: The symmetrical floor plan mimics a traditional Montana barn with two wings, but one is actually a screened-in porch.

IS THE MARTIN FAMILY'S striking timber frame "rec barn" built near the Swan Mountain Range in Montana a new structure or an old one? The correct answer is probably both.

The barn was built just a few years ago and incorporates state-of-the-art mechanical features, but it was built almost completely out of reclaimed wood from barns, sawmills and other buildings in rural Montana, all of it decades old.

Indeed, the weathered, cinnamon-

colored wood gives the home such a feeling of age and belonging it's hard not to believe that it isn't a remodel of an existing structure. "We wanted this particular building to have a sense of history," says owner Roger Martin. "As much as possible, we wanted it to feel like an old barn that's been on that spot for a long, long time."

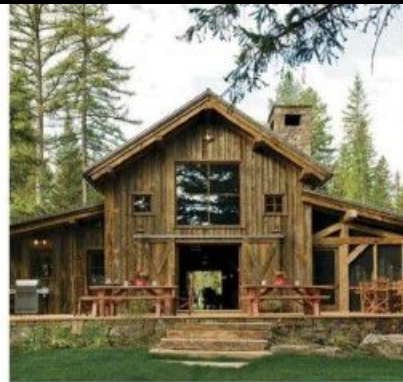

The family was building a primary residence nearby, but wanted a separate structure for entertaining and rec-

reational activities down by the spring-fed lake. It's only 850 square feet inside and has no bedrooms, but the simple design has room for a small kitchen, a bar, a gathering area centered around a majestic fireplace, a pool and foosball table, and, in the loft, a long shuffleboard table.

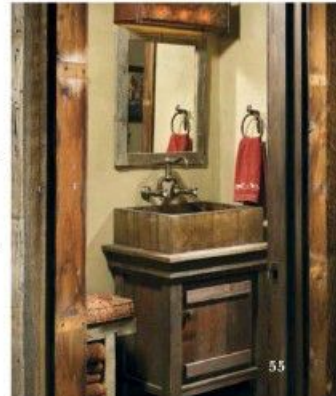

Paul Miller, partner at RMT Architects in Avon, Colorado, designed the building with the classic proportions of an old barn, a screened-in porch

The cabinets in the kitchen were all handmade from reclaimed wood, while the hammered-metal countertops were made by a local metalsmith.

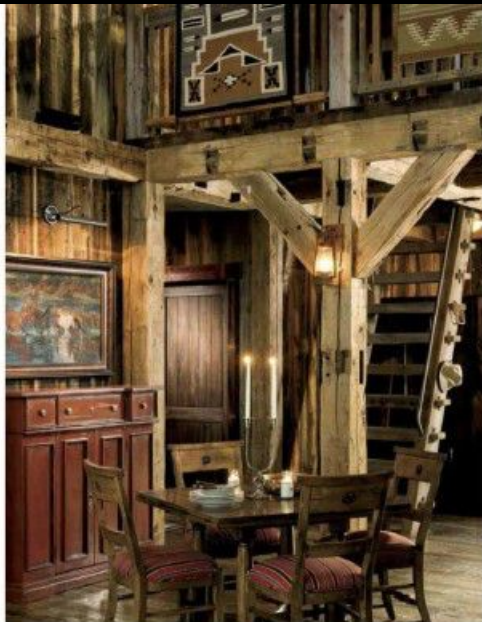

CLOCKWISE FROM TOP LEFT: Indoor and outdoor living merge at dusk when the doors are thrown open on both sides of the rec barn. • Because of the sliding doors, the flat lot and expansive outdoor areas feel like an extension of the barn's interior spaces. • The lakeside location offers crystal clear views of the Montana mountains. • A concrete sink and custom cabinet made from reclaimed wood carry the attention to period detail into the barn's bathroom. • The sprawling back porch provides plenty of extra seating for the tiny 850-square-foot barn. • A Western-themed light fixture lights the living area and complements the barn's rustic interiors.

LEFT: The rec barn was built to entertain. A small bar is tucked into a corner of the great room.

ABOVE: The small dining table sits below the sun-drenched loft, reached by an old-fashioned ladder.

OPPOSITE: A sitting area tucked into the loft provides a quiet retreat in an open floor plan. A framed beaded vest is an unusual but fitting focal point for this eclectic space.

cleverly substituting for one of the wings. It even includes sliding barn doors on both sides that can be opened to a stunning, through-the-building view of the lake.

Timber framing was essential to the structure. "I love the history and romance of Montana, and that goes hand in hand with the architectural heritage of the state," Miller says. "To me, the timber-frame design is really a part of that."

The reclaimed wood was the other critical element. It's become increasingly popular in Montana construction, says J.L. Halverstadt of Wild Wood Eccentrics in Whitefish, Montana, which

provided the Douglas fir and ponderosa pine planks and beams that came from old buildings. The wood is prized both for its rustic look and for being an environmentally responsible choice. "People who feel a commitment to the green movement like the fact that you're reusing something instead of cutting down more trees," Halverstadt explains.

The Martin family took that commitment farther than most. "You usually see reclaimed wood used more as a decorative element, but probably 90 percent of this project was done with recycled material," says Brad Reedstrom, co-owner with

Andy Fischer of Bigfork Builders in Bigfork, Montana. "That's really an incredible amount."

The most challenging aspect of the Martin home, Reedstrom says, was the structural timber frame that supports the building. "Because we were working with reclaimed timbers that had joinery and mortises and notches in them," he explains, "you had to take real care in selecting the appropriate piece of wood."

The result, however, is just as the Martins hoped — a family-friendly modern barn that's true to Montana's history and heritage. *
